(54) METHOD AND SYSTEM FOR DISTRIBUTING BIOLOGICAL INFORMATION

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a method and system for distributing biological information which distribute the biological information of a patient to a medical doctor, etc., at a remote place by means of a simple system and which prevents the leakage of personal information of the patient without limit.

SOLUTION: The method for distributing the biological information distributes the biological information measured by a biological information monitor (1) mounted to the patient to a portable information terminal (4) held by a medical stuff who is at a place remote from a server through a communication line. The method carries out distribution of the biological information by: a step of generating alarm information when the biological information is an alarming state; a step of adding URL to the alarm information and transmitting a mail with URL to the portable information terminal held by the medical stuff corresponding to the alarm information; a step of allowing the medical stuff receiving the mail with URL to access the server by indicating the URL displayed on the display part of the portable information terminal; and a step of authentication by the server to the access and thereafter distributing the biological information of the patient from the server to the medical information terminal.
